Lanciani

This book is an invitation to discerning clients to explore design possibilities with our Lanciani products.

Inspired by nature

Product Concept

From a gentle sea breeze to the depths of the vast ocean, you can explore different levels of expression with our original Panel series.

Introduction

Inspired by the distinctive structure of natural and man-made textures, we constantly strive to create unique surfaces that transform the cold, smooth shape and structure of interior surfaces.

The geometry of moving water represents to us an example of how to visually represent the dynamics of nature in interpretive form.

Flowing, dynamic shapes give the interior landscape a straight-edge-consuming complexity and elegance, as found only in nature.

Sand Flow

Flysch

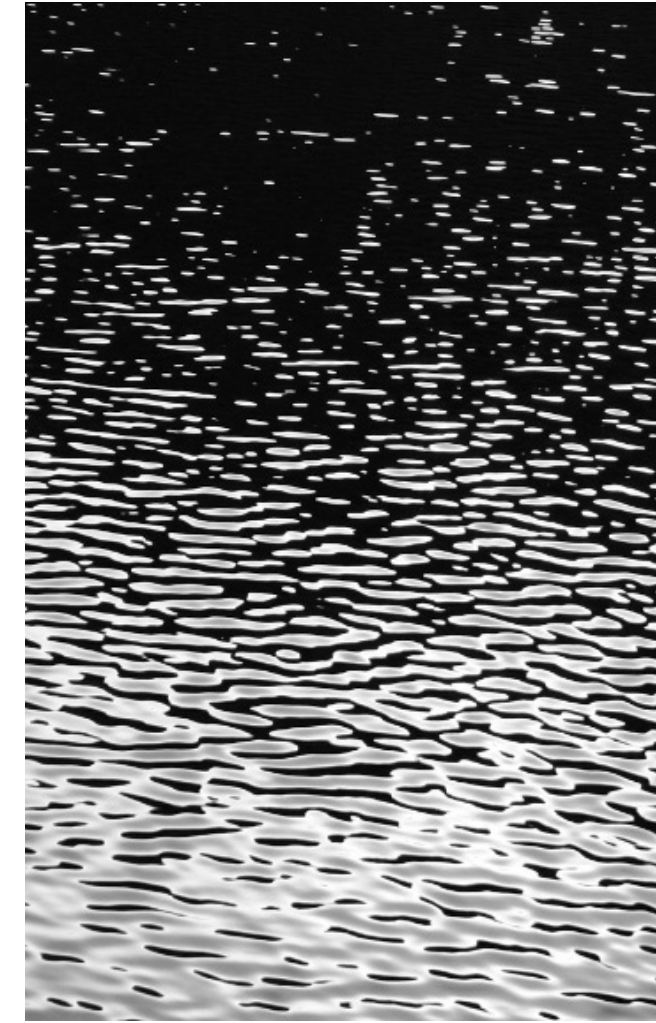

Pyroclastic Surge

Waffle Form

Wave

Ripple

Pattern : From Nature.

Inspired by the distinctive structure of natural and craftsmanship textures, we constantly strive to create unique surfaces that transform the hard, smooth shape and structure of interior surfaces.

Hanji, Korean paper

1000 years of persistent vitality·····

Hanji is made of mulberry stem and breathes on its own.

Traditionally, Korean paper has been used as building material for windows and walls because of its excellent durability and preservability.

Hanji absorbs odor and moisture through fine fibers to control indoor air quality and humidity, and purifies the atmosphere.

In addition, Italy and France recognize the value of Hanji, which is a wonderful material for cultural heritage restoration. Hanji is superior in durability and preservability than any other paper, and is very important in restoring Western cultural properties.

Lanciani Products

Lanciani relief Panel systems for sub-dividing environments and for architectural definition of internal spaces:
Walls, Doors, Sliding Panels and Walk-in Wardrobes.

Wall Panel

Wall Panel & Door system

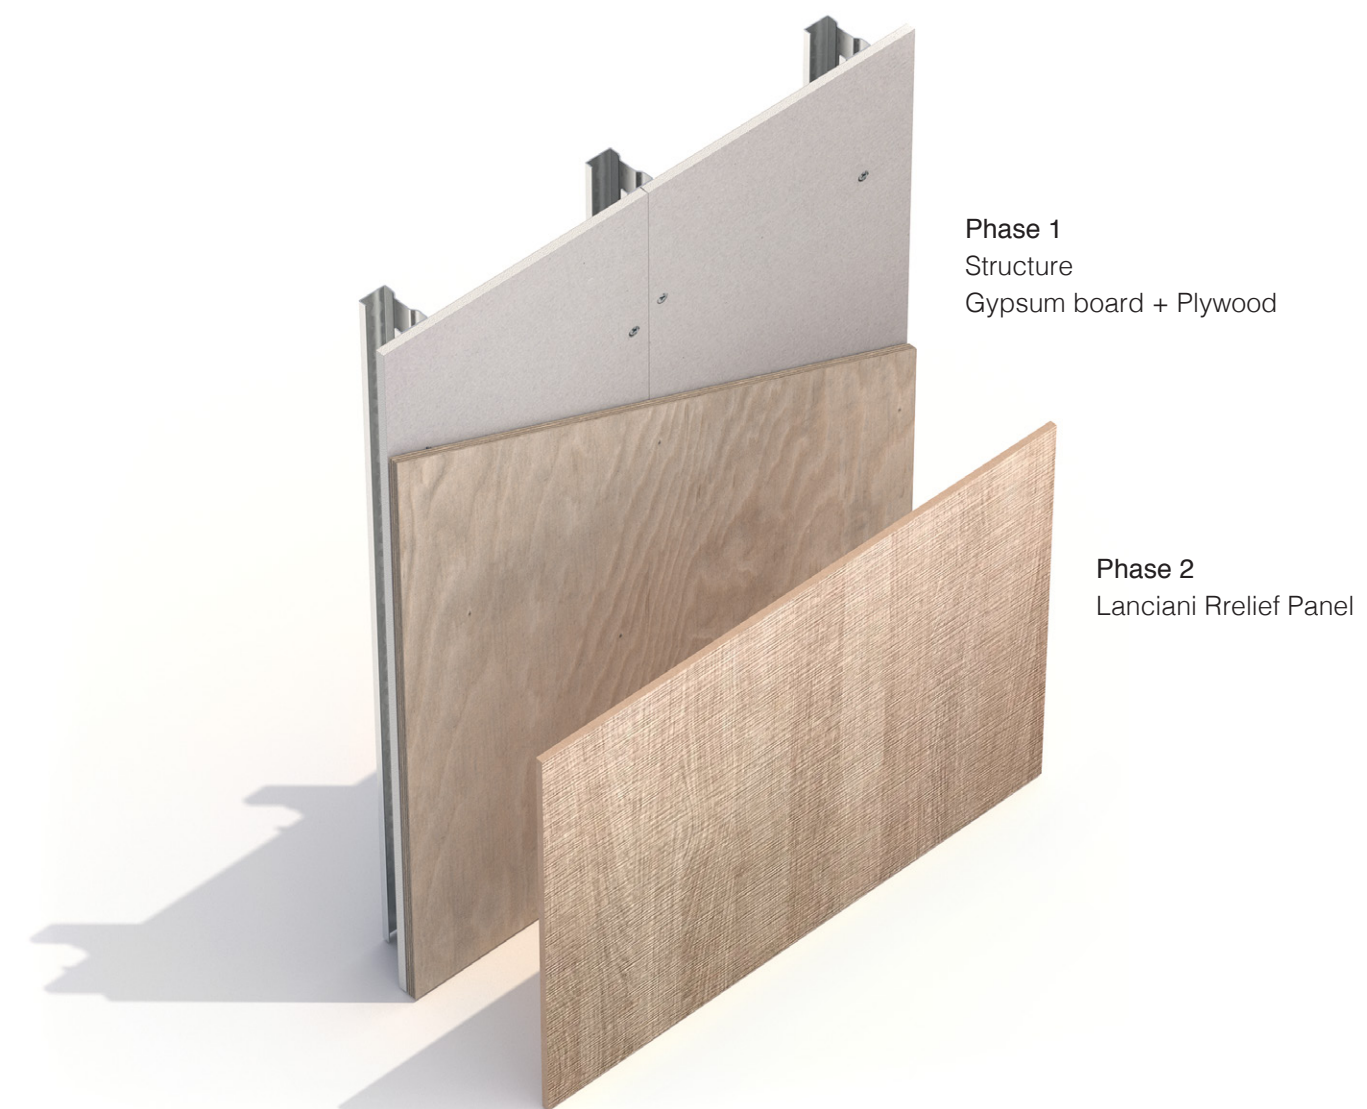

Walk-in Wardrobes Door Panel

Lanciani Relief Panel Series

The Company has undertaken extensive design research to introduce ever new functional innovations, taking maximum advantage of the potentials of relief panels resulting in structures and jambs that provide superior performance.

From Lanciani relief textures to the naturalness of wood and incorporating the strength of lacquer colours, the Lanciani range of relief panels are not only aesthetically unique but one can also enjoy the movement of light across the textured surfaces. The process of design, attention to detail and high standard of production techniques will assure complete reliability over time.

Technical Specification

Panel size	1,200 × 2,400
	1,200 × 2,700
	1,200 × 3,000
	1,200 × 3,600

Thickness	Sand Flow	11.7 mm
	Flysch	8.5 mm
	Pyroclastic Surge	8.3 mm
	Waffle Form	8.3 mm
	Wave	7.7 mm
	Ripple	7.2 mm

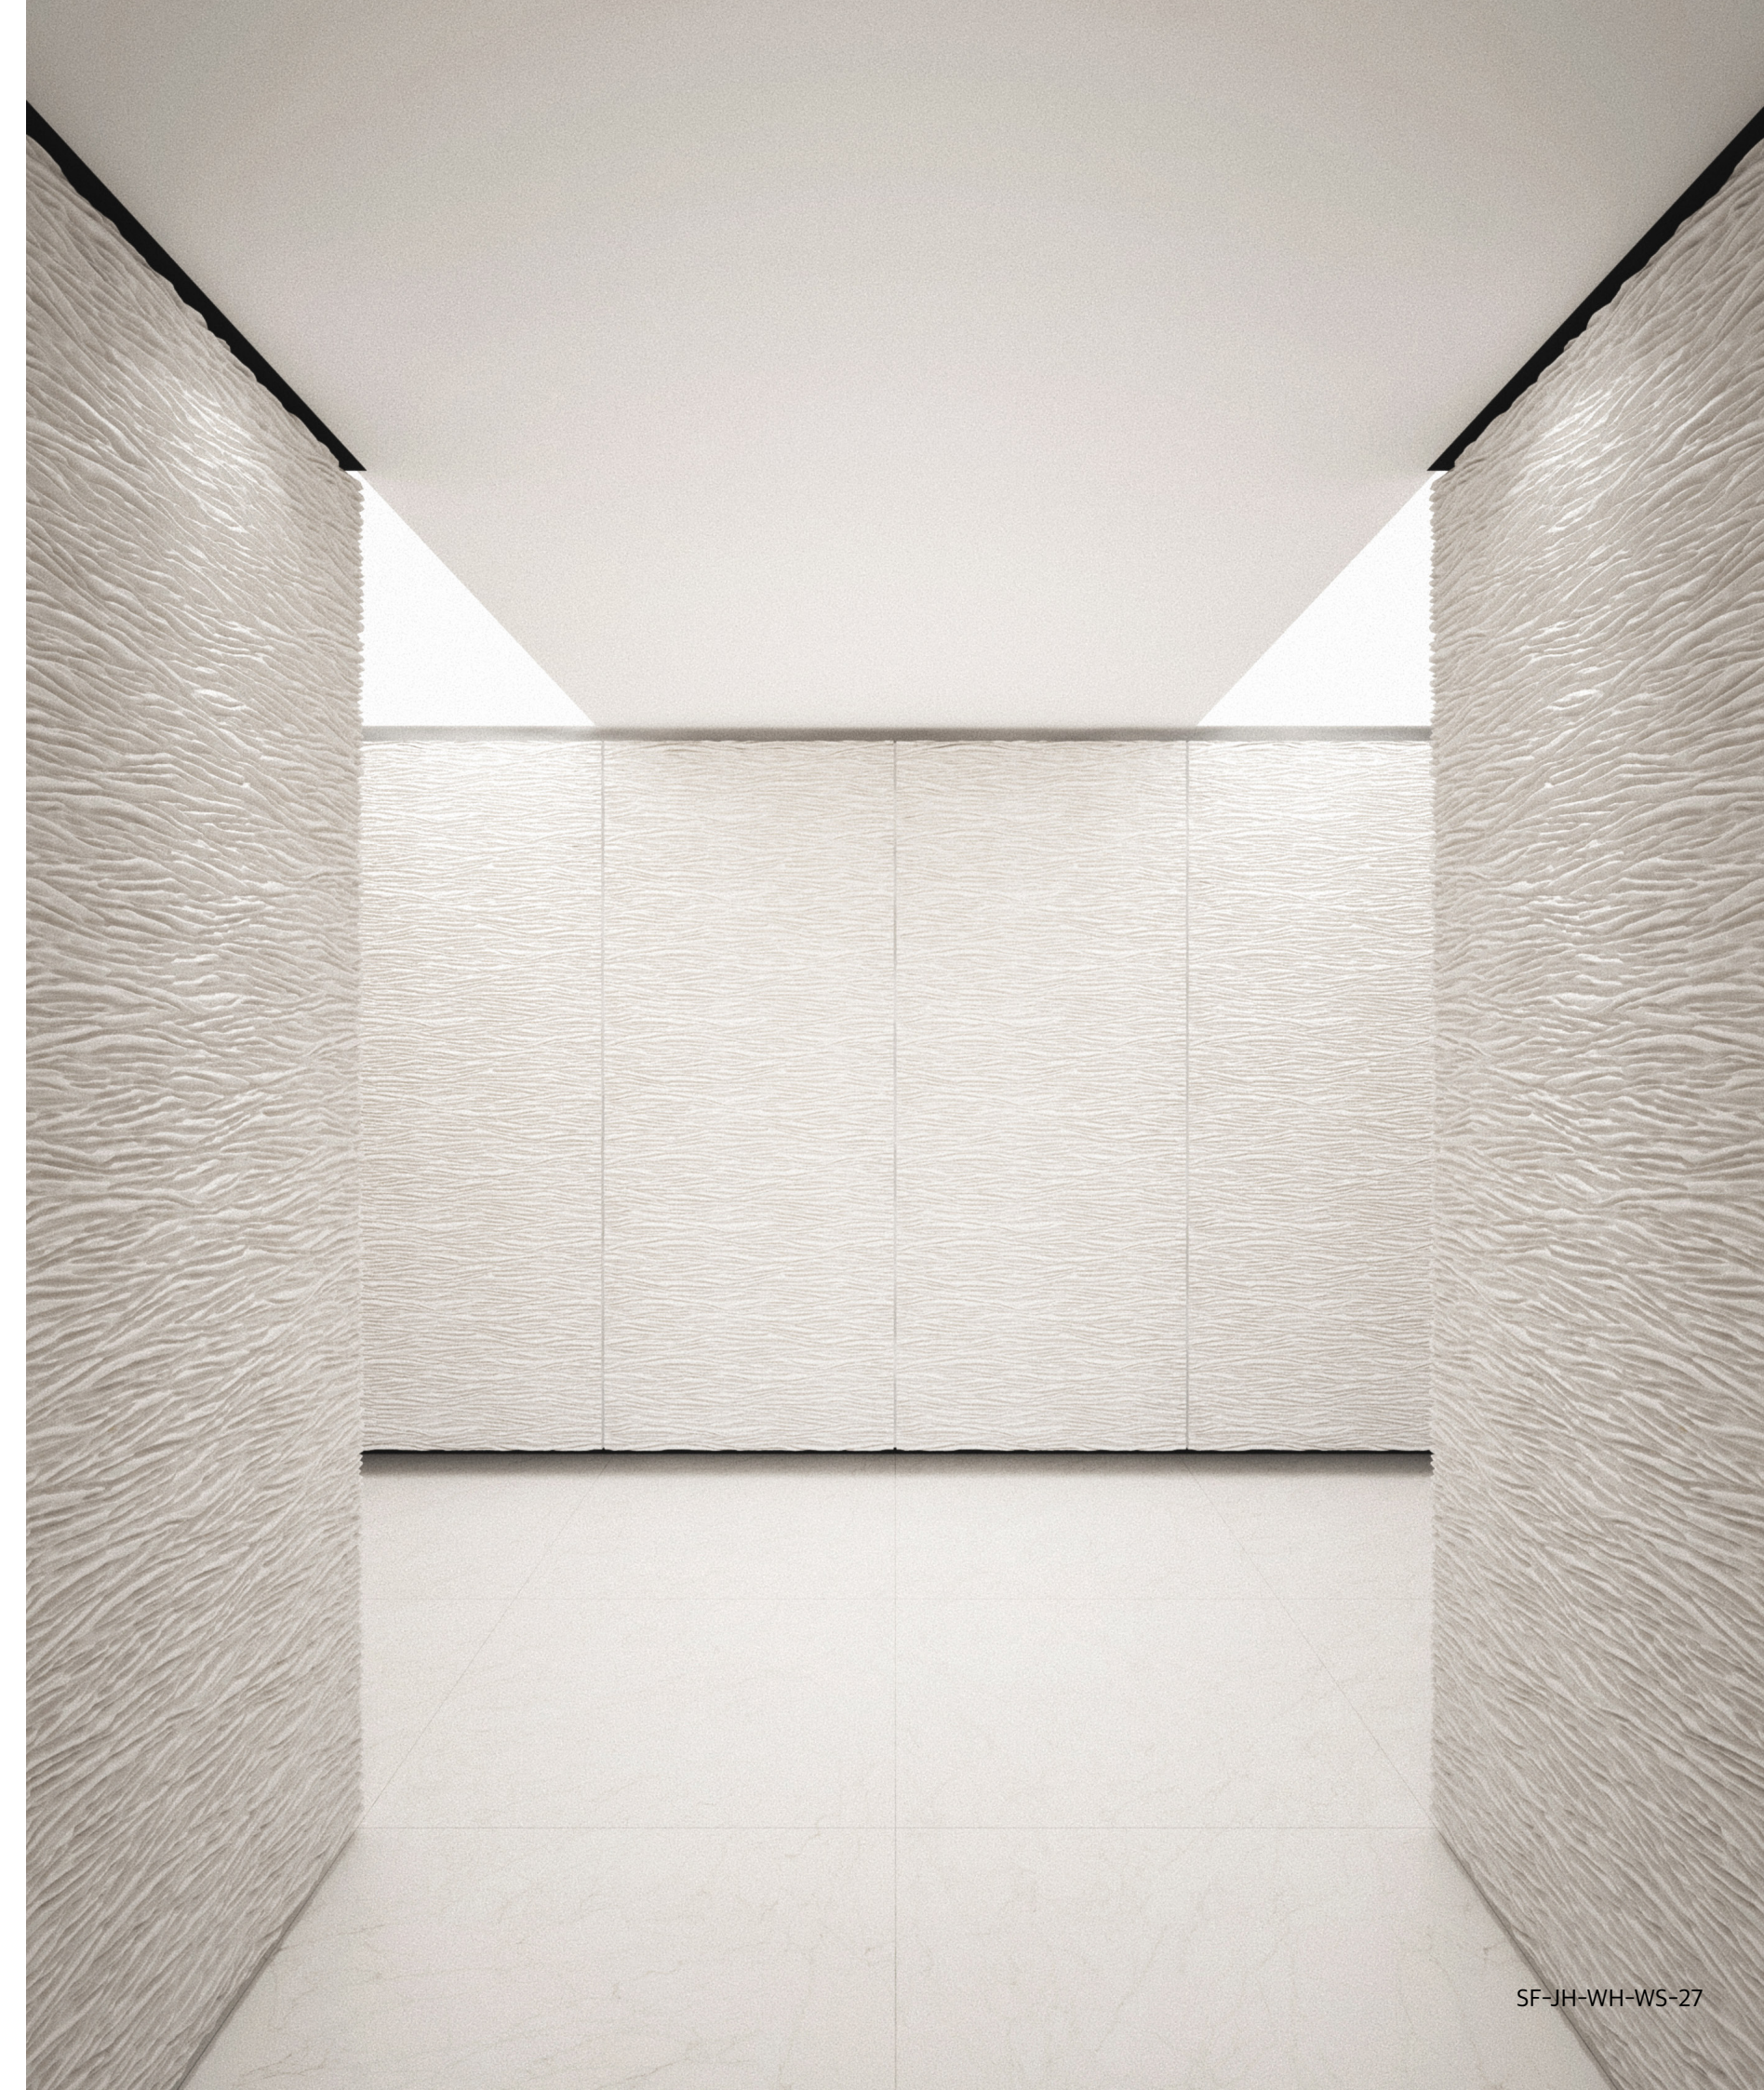

Final Finishing	Clear Matte Paint
------------------------	-------------------

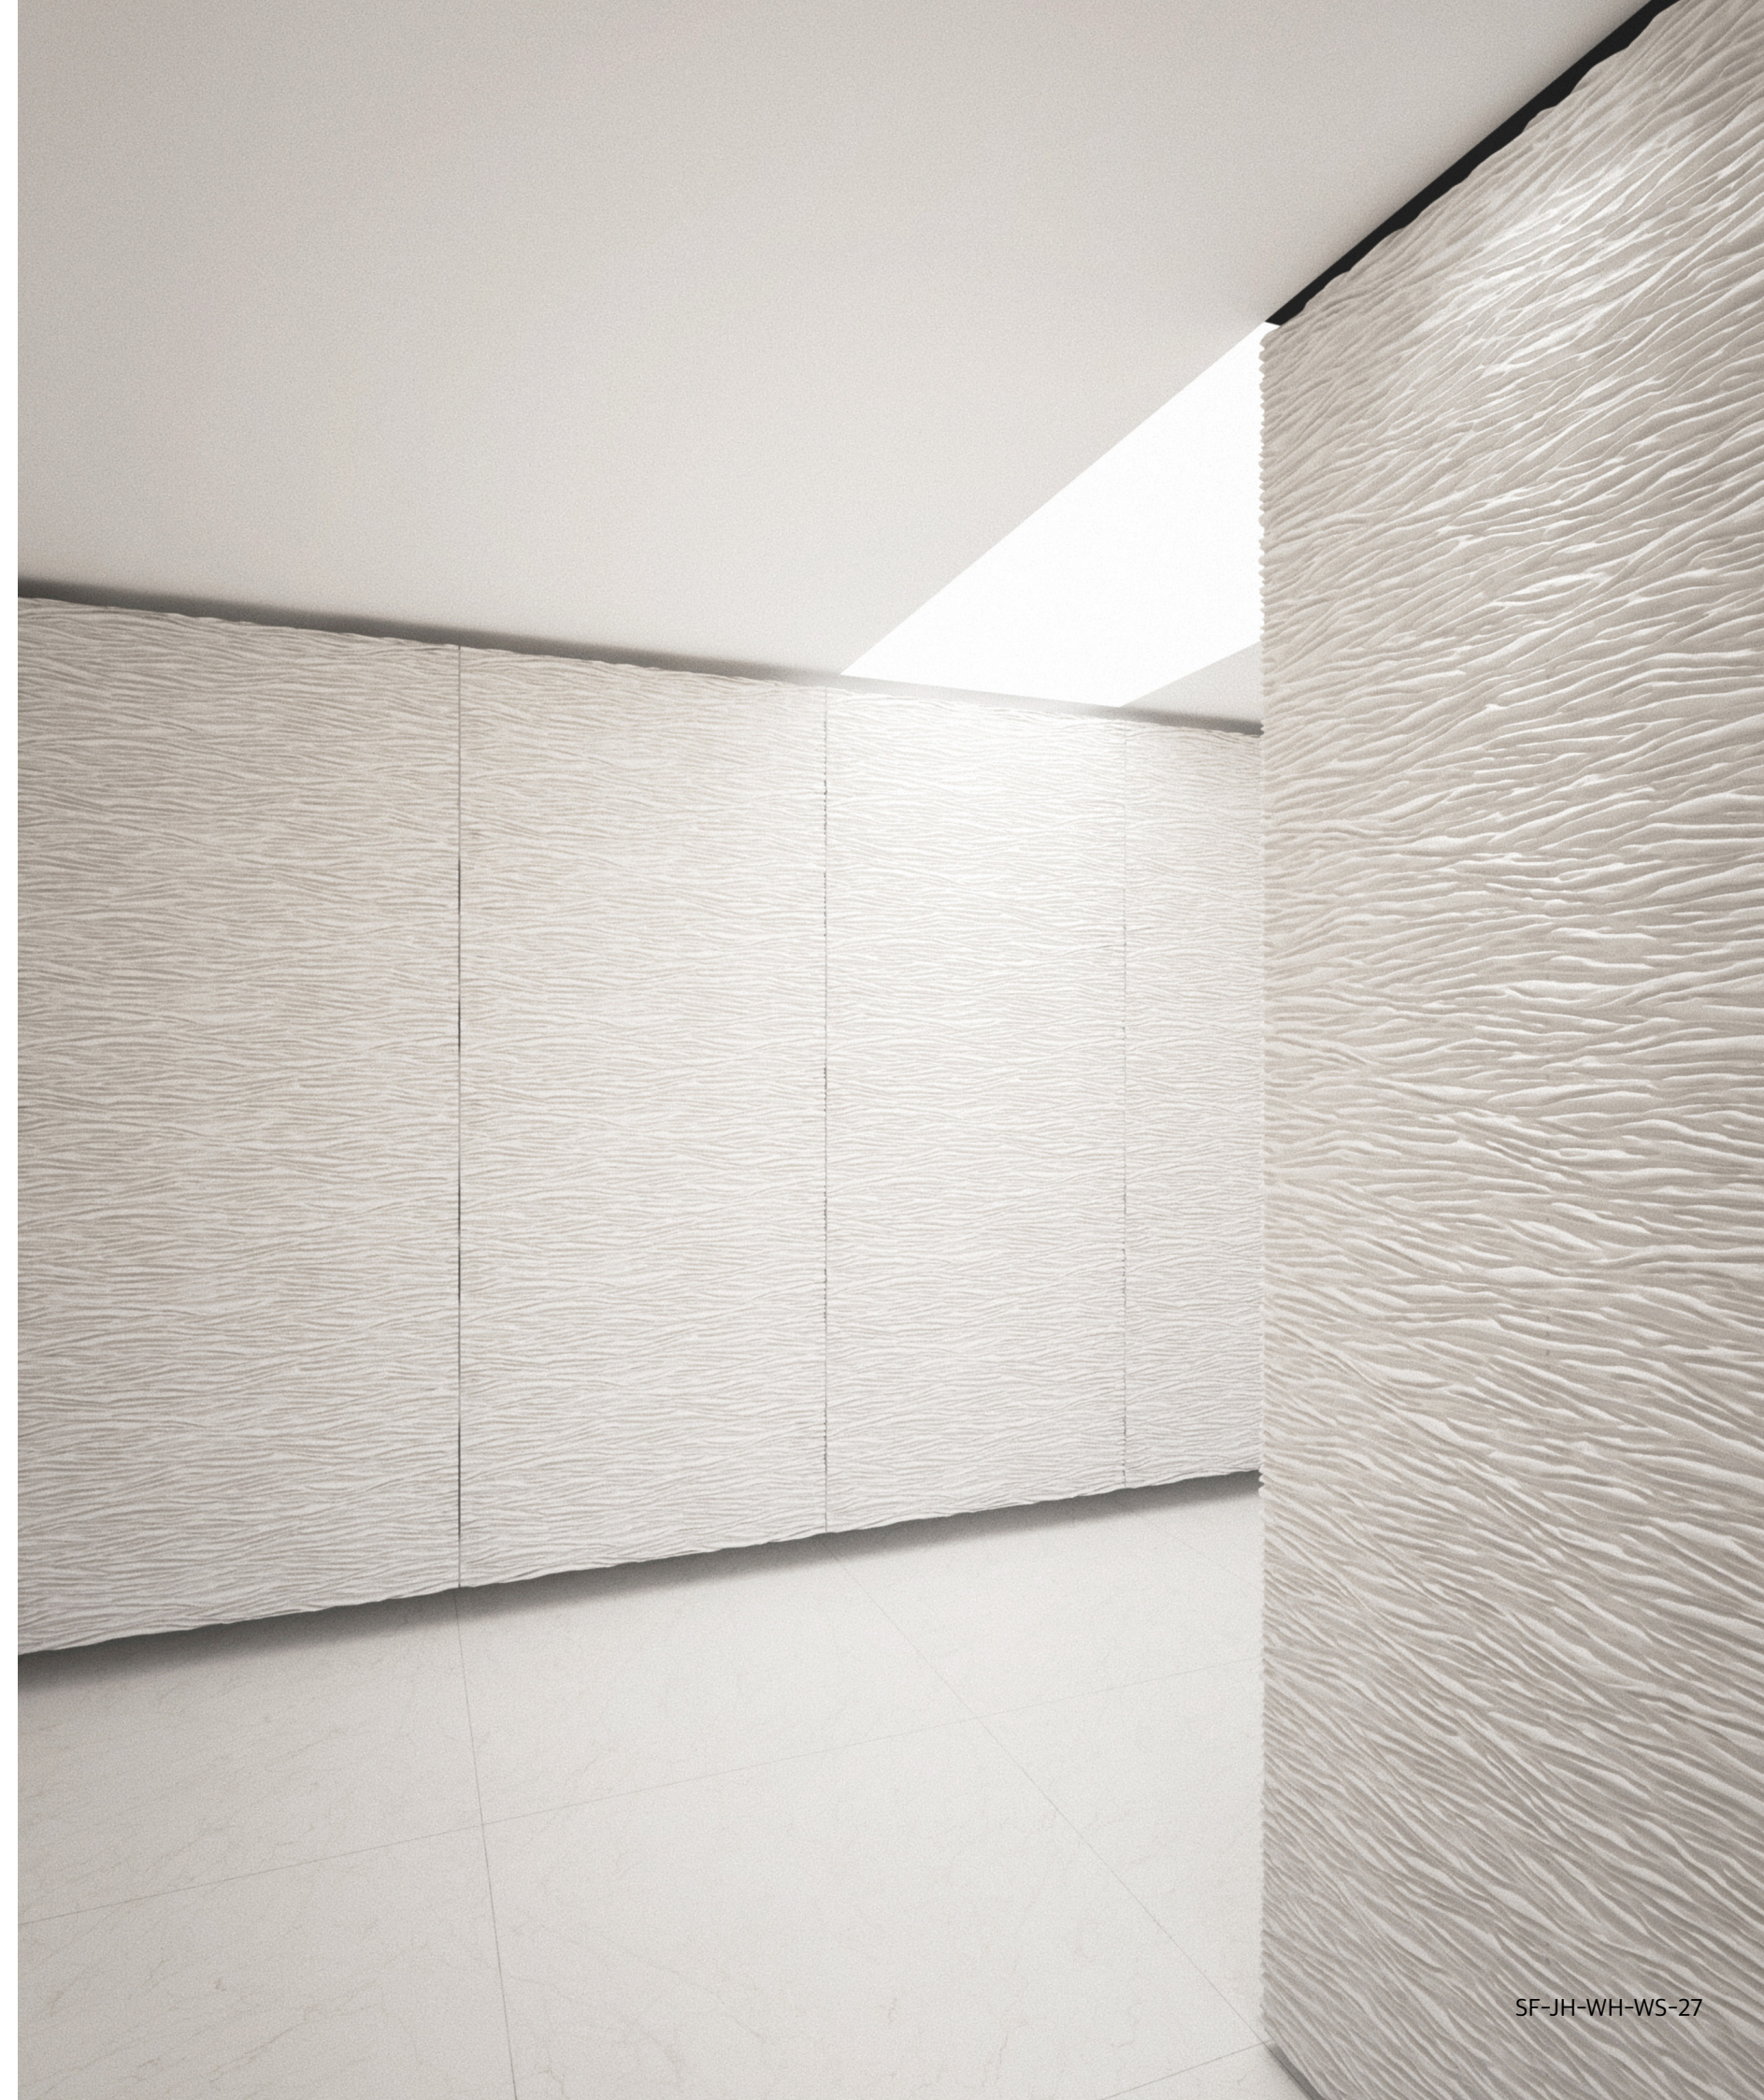

Sand Flow Pattern

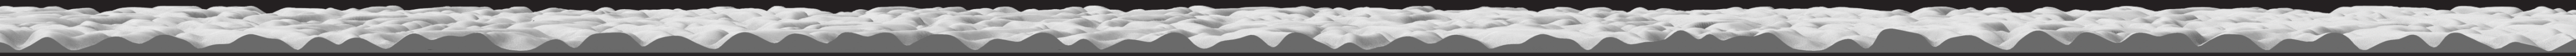

Active, Dynamic

Sand flows appear in various forms that can not be predicted by the wind. It is a behavior that follows a steady, continuous flow. This flow contains non-formal and active energy. The free pattern and the visualized pattern of energy make space a very active and dynamic atmosphere.

Sand Flow Pattern Section

Flysch Pattern

In-depth. Graceful

Flysch is a thin, hard gray, giant sandstone, characterized by depth and rhythm continuity. The overall thickness of the fleece showing this sequence is typically thousands of meters and includes natural changes. Designed with these natural shapes, the Flysch pattern is discontinuous but dynamic and offers a sense of depth. This pattern allows us to feel the depth of nature and the flow of time in space.

Pyroclastic Surge Pattern

Noble, Sublime

Volcanic eruptions are formed by fluidization of turbulence. The pattern formed by this spout is very intense and the flow is fast. The motif of this pattern is irregular, but adds speed and rhythm to the flow. An irregular but predictable rhythm can give a subtle feel to your space.

Waffle Form Pattern

Texture, Comfort, Stable

The waffle pattern creates a very lovely and beautiful texture pattern in space. Waffle patterns can be found in natural forms such as terrace rice paddies. This pattern of repeating small squares is peaceful, sometimes humorous, and romantic. This pattern makes the atmosphere of the space comfortable and stable.

Wave Pattern

Dynamic, Vivid, Live

A wave is a disturbance that transfers energy through matter or space, but it is an energy movement and a kind of signal. We can feel the vibrations of time and space through this wave pattern. This wave pattern enhances the dynamic feel by maximizing the smoothness and movement of the curve. This wave pattern makes space more vivid and live.

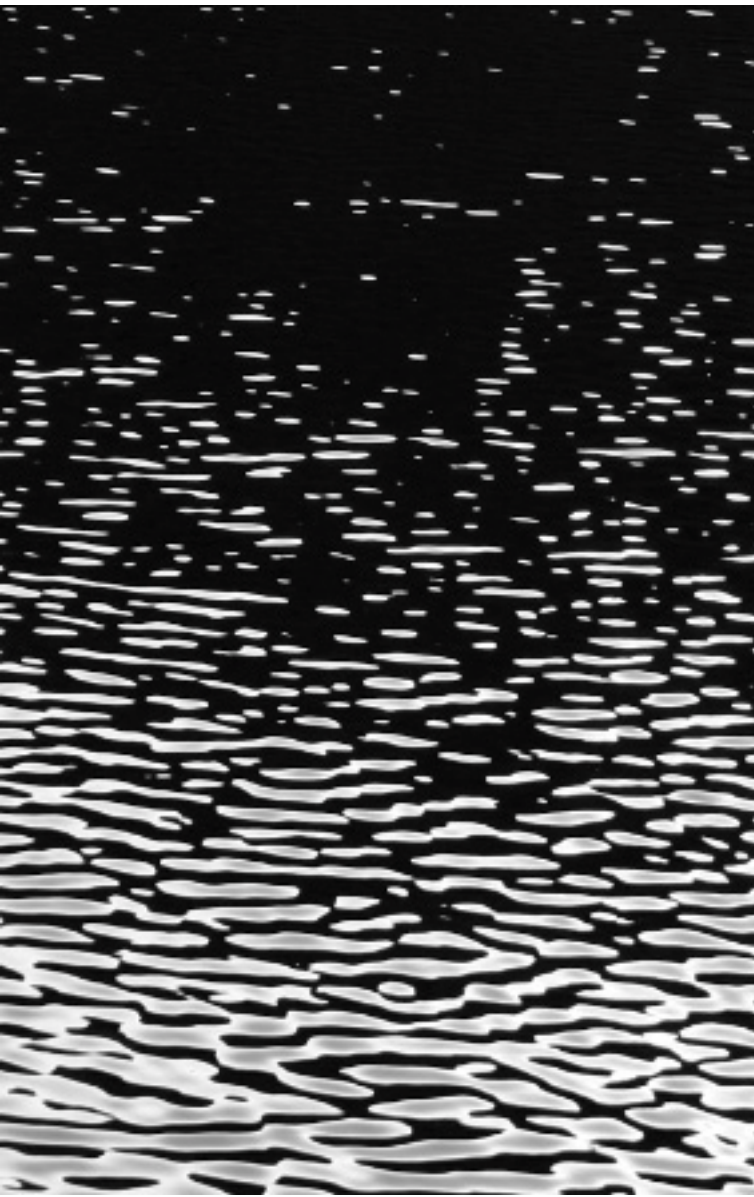

Ripple Pattern

Calm, Peaceful

Waves are caused by small waves or series of waves on the water surface, especially a slight breeze or falling wave. As a design motif, the pattern with ripples gives you a natural feeling of sound and a relaxed feeling that includes the sequence. These patterns stimulate auditory visual imagination in space. This pattern will make the space very peaceful and romantic.
